PROFESSIONAL SUMMARY

PHP/Laravel Developer with 7 months of hands-on experience shipping production and AI-integrated web applications end-to-end. Contributed to a live Weighbridge ERP system, independently built a full-stack AI-powered job application tracker and a Django REST wholesaler ERP, and won 1st Rank at the Code Chaos 1.0 Hackathon. Strong foundation in MVC architecture, relational database design, and JavaScript. Ships fast with AI pair programming (Cursor AI, Antigravity AI) while owning the architecture and understanding every layer of the code; quick learner ready to own features from day one.

TECHNICAL SKILLS

Languages: PHP, Python, JavaScript (ES6+), SQL, HTML5, CSS3

Frameworks & Libraries: Laravel 12, Laravel Breeze, Blade, Eloquent ORM, Django 6, Django REST Framework, jQuery, Bootstrap, Tailwind CSS, Alpine.js

Database: MySQL, SQLite; schema design, foreign keys, transactions, row-level locking (select_for_update)

JavaScript Concepts: DOM Manipulation, Event Handling, Async/Await, Promises, Fetch/AJAX, ES6+ Array & Object Methods

APIs & Integration: REST API design (DRF), Google Gemini AI via Laravel HTTP Client, Session & Basic Auth, PDF/QR generation (ReportLab, qrcode)

Tools & Others: Git, GitHub, Vite, Composer, npm, XAMPP/WAMP, MVC Architecture, AI-assisted development (Cursor AI, Antigravity AI)

WORK EXPERIENCE

Intern - PHP/Laravel Developer | Tuvoc Technologies Pvt Ltd, Ahmedabad, Gujarat (On-site) | Dec 2025 - Jun 2026 (7 Months)

- Developed and maintained web application modules using PHP, Laravel, HTML5, CSS3, and JavaScript, following MVC architecture, with responsive, cross-browser front-end pages.
- Wrote and optimized SQL queries for data retrieval, insertion, and updates using MySQL and Laravel Eloquent ORM.
- Worked on a live Weighbridge ERP System for 2 months as part of the production support/development team (see Projects).
- Collaborated with senior developers to debug issues, implement feature requests, and perform unit-level testing before deployment; incorporated code review feedback using Git/GitHub.

ACHIEVEMENTS

1st Rank - Code Chaos 1.0 Hackathon | Organized by Tuvoc Technologies Pvt Ltd | Mar 2026 | Team of 5

- Won 1st Rank building a real-time ticket booking system solving concurrent seat-locking, preventing double-bookings under simultaneous user load across venues (theaters, stadiums).
- Contributed across the stack (backend/API logic, database schema, seat-locking, frontend UI) from idea to working demo, using Cursor AI to iterate under time constraints.

AI-ASSISTED DEVELOPMENT

- Use AI pair programming (Cursor AI, Antigravity AI) for scaffolding, REST boilerplate and refactoring, then review every change before it is committed.
- Design the architecture and database schema myself and trace each feature end to end (route, controller, model, view) so I can explain, debug and extend any block of the code.

PROJECT EXPERIENCE

Wholesaler ERP - B2B/B2C Supply Chain & Billing Platform | Personal Project | github.com/vedant1994/wholesaler-erp
Tech Stack: Python, Django 6, Django REST Framework, SQLite (PostgreSQL/MySQL ready), ReportLab, qrcode

- Built 7 connected apps (Accounts, Products, Orders, Billing, Payments, Customers, Shipping) with Wholesaler/Retailer roles, web templates and a REST API.
- Implemented FEFO (first-expiring-first-out) stock allocation with @transaction.atomic and select_for_update() to prevent race conditions; orders fall back to WAITING_FOR_STOCK and auto-fulfill when stock arrives.
- Automated GST invoices (5%, 12%, 18%) with sequential numbering, PDF + QR output, retailer POS billing (CGST/SGST), and a double-entry ledger with partial-payment tracking.

Job Tracker - AI-Powered Job Application Manager | Personal Project
Tech Stack: Laravel 12, PHP 8.2, Blade, Tailwind CSS v4, Alpine.js, Vite, SQLite/MySQL, Google Gemini AI

- Built a full-stack Laravel app from scratch with CRUD for applications, Laravel Breeze multi-user auth, a relational schema (users, applications, AI history) and an analytics dashboard.
- Integrated Google Gemini AI via Laravel HTTP Client to generate cover letters, interview questions, and a 0-100 resume-to-job match score with strength/gap analysis.

Weighbridge ERP System - Live Production Project | 2 Months | PHP, Laravel, MySQL, JavaScript, HTML5, CSS3

- Worked on a live ERP managing vehicle weighment (entry/exit, gross/tare capture, net weight); built ticket/slip generation and weighment history reports in Blade and designed MySQL tables/queries for vehicle, party and transaction records.
- Added JavaScript form validation and dynamic UI to reduce data-entry errors; resolved production bugs with the QA/support team to keep downtime minimal.

EDUCATION

Integrated M.Sc., Information Technology - GLS University, Ahmedabad | 2023 - 2028 (Pursuing) | Current CGPA: 7.09
